
Project

Private Hospital

Location

Cromwell Road, London

Accommodation

Radiotherapy unit hospital
Refurbishment of 170 bed
spaces

Value

£25m

Client

Medical Services International
Ltd

Holder Mathias was invited to prepare designs for a radiotherapy department at a newly built private hospital in Cromwell Road, London. The project provided the hospital with the first major radiotherapy unit in the UK and included two large linear accelerators, a chemotherapy whole-body scanner, orthovoltage treatment and simulator with associated consulting rooms.

The commission led to the client extending their brief. Additional specialist facilities such as an angiography unit for diagnosing heart diseases, a fertility unit, pediatric accommodation and additional physiotherapy facilities followed.
